

# ***SOLAR POWERED ELECTRIC GATE OPENERS***

## App Controller Installation/Wiring

1. Unscrew and remove the top plate from the device.
2. Using the supplied 2 core wire, insert and secure wires to the 'Output 2' terminal on the app controller. The other side of this wire, attach to the accessory terminal H0 and 0V/GND on the gate opener circuit board
3. Cut off the USB plug, strip wires and connect wires to the same terminal slots as the batteries. The plug on the other end of this wire plugs into the app controller so be sure to leave enough wire length to reach. Double check you have the correct wire before connecting.

4. Secure app controller inside the control box. This unit is not weatherproof and must be installed inside control box (for swing gates) or inside motor housing (for slide gates)
5. Follow the app controller instructions for software set up including app download.
